Professional Summary

Software Engineer based in New Delhi, India, with experience building and deploying full-stack web applications, backend services, automations, and software products. Skilled in Next.js, Node.js, TypeScript, Python, JavaScript, SQL, MongoDB, and PostgreSQL. Experienced in frontend and back-end development, API development, database design, software architecture, and integrating third-party services with hands-on experience developing production applications across web and software engineering projects.

Technical Skills

Languages: JavaScript, TypeScript, Java, Python, SQL, HTML5, CSS3
Backend: Node.js, Express.js, Spring Boot, REST APIs, Microservices, WebSockets, Authentication
Databases: PostgreSQL, MongoDB, MySQL, Redis, Supabase, pgvector, SQL Optimization
Frontend: React.js, Next.js, Tailwind CSS, Three.js
Engineering: System Design, OOP, Data Structures, Unit & Integration Testing, Debugging, Code Review
DevOps: Docker, Docker Compose, CI/CD, GitHub Actions, Vercel, Git

Professional Experience

Tynari (formerly Printeast) *Apr 2026 – Jun 2026*

Full Stack Developer

- Developed a browser-based SVG design studio with a custom Bezier node editor and a 7-mode text-warp pipeline, cutting render time by roughly 40% through algorithmic improvements.
- Built a real-time, non-destructive image filter and pattern designer with layer-based editing integrated into the canvas editor.
- Led architecture for a Shopify-style theme store on a microservices backend using Next.js and Node.js, enabling theme editing, product management, and one-click publishing.

Triveni Industries – Triveni Pumps Division *Dec 2024 – Jan 2025*

Full Stack Developer (Freelance)

- Built a scalable e-commerce platform using React, TypeScript, Node.js, MongoDB, REST APIs, and microservices, reducing API latency by 35–40% through Redis caching and query optimization.
- Integrated Cashfree payment processing, JWT-based session management, and role-based access control (RBAC), plus an admin dashboard for analytics and inventory tracking.

Projects

V-Anime Revived – Anime Streaming & Tracking Platform *Next.js, React, TypeScript, Convex, Clerk, Hls.js*

- Built a custom HLS video player with adaptive bitrate streaming, automatic intro/outro skip detection, multi-server failover, and resumable playback.
- Designed a cache-first Convex data layer that serves metadata in under 5ms and eliminates upstream API rate-limit errors, paired with Next.js edge ISR for 15ms page loads.
- Implemented cloud-synced watch history and library tracking with guest-mode local storage that merges into the user account on sign-in.

Beacon – Privacy-First Web Analytics Platform *Next.js, Convex, Python, Vercel*

- Built a self-hosted, cookie-free web analytics platform as a privacy-focused replacement for a shutting-down provider, using a vanilla JS tracker with daily-rotating SHA-256 hashing for visitor identity instead of cookies.
- Designed a Convex ingestion pipeline with HTTP action endpoints and cron-based daily rollups, paired with a real-time Next.js dashboard deployed on Vercel.
- Built a Python ETL pipeline to migrate 4,186 historical events from Parquet exports into the new system.

Education

GGSIPU – Institute of IT & Management, Janakpuri *2024 – 2026*

Master of Computer Applications (MCA), Information Technology (coursework complete)

GGSIPU – Institute of IT & Management, Janakpuri *2021 – 2024*

Bachelor of Computer Applications (BCA), Information Technology

Certifications & Achievements

- Wipro Java J2EE Certification – Enterprise Application Development (2023)
- 1st Place among 50+ teams – ODE TO CODE, a national algorithmic coding competition at Techno Sapiens AIEC (Mar 2024)
- 1st Place – CSS Battle, a competitive front-end/CSS speed-coding contest at MATRIX Internware IITM (Oct 2023)
